

MAGNETIC Testing

Steel Structure Analyzer NOVOTEST KRC-M-2

Steel Structure Analyzer (structurescope) is designed for non-destructive quality testing of chemical-thermal, thermal and thermomechanical treatments.

Steel Structure Analyzer allows to determine the mechanical properties and hardness of metals and to test the ferromagnetic products if there are any correlations between tested parameters.

In addition, the device is used for testing the surface layers of ferromagnetic materials and the metal for presorting steel grades.
